

What goes into our rivers impacts what goes into your glass.

Ever wonder where the water in your glass comes from? For most of us, it comes from our rivers. But when rain falls and snow melts, the resulting storm water can run down hills, flow through creeks and streets, and overwhelm our aging sewer systems.

Everything this water touches—from the chemicals in our yards, to the motor oils in our streets, and even raw sewage—is washed into our major source of drinking water. Our rivers.

But there is a solution. A lot of dedicated people and municipalities are working on it. And you can help too.

Use environmentally friendly lawn and garden products. Never pour oil or paint in a storm drain.

Check with your local community about disposing of or recycling paint, oil and other chemicals. Because when it comes to clean water, we all drink from the same faucet.
