

What we feed into our storm drains can poison our rivers.

When the rain falls and the snow melts, a flood of water runs off our roofs, roads and yards and down into our streets. Everything the water touches is swept down those streets and fed directly into our storm drains. And then flows out into our rivers—the major source of our drinking water.

Trash. Paint. Oil.
Fertilizers. Animal waste.
Anything in the path of the storm water can find its way to our rivers through our storm drains.

But there is something we can do about it. In fact,

a lot of dedicated people and municipalities are working on it right now. You can help too.

Use environmentally friendly lawn and garden products. Properly dispose of oil, paints and other household chemicals. And please, don't litter the street or the landscape.

To find out more, visit our website. And discover how to keep our rivers from going down the drain.
